# WESTMINSTER INTERNATIONAL UNIVERSITY IN TASHKENT

This website represents a sock show room. The main audience of this website are teenagers, but every person can find the sock design he prefers. It is the best place to find a present for somebody if you are confused with the choice of a present because everybody wear socks!

Main Page

Main Page consists of two banners.

The first banner includes a WIUT default text and a photo next to it.

The second banner includes another text

and a slider. The logic of slider is that there is a container with slider elements inside of it. Each element has 2 classes. One of them is individual for every class and the second one is universal. The universal one is needed to show an object on the page. By default the display is none in css.

Java Script makes an endless cycle in whit it takes a length of an object and shows objects equal to the amount of the elements. Each elements has the universal class.

In About section there are two banners.

The first Banner consists the text about company

The second Banner there are the rewards. They made by creation of common container with three containers inside of it. Also I added the flex.

The Context sections works the same way and it has only one Banner with a

Background which is repeated. There are three elements with a box shadow to make shadows. It made the same way as Rewards section (took 1 container, inserted there 3 containers & made flex)

Form includes 4 types of input:

1. input type text-for the name

2. input type email-for email

3. text area-for message

4. input submit-to submit a form

First of all I removed the default settings from css to set my own settings

wrote pseudoelement 'focus' to make the color of input to change while the cursor is on it. And added the transition

property 0.4 sec

Products

Products made the same way, through flex. Also it contains links to separate pages with the goods.
